CLIENT Bruntwood SciTech | Braithwaites

DESIGNER Artin Light

CONCEPT Artin Light's concept utilises the shape of the entrance portal, echoing the structure to accentuate the angles of the steel frame. Artin wanted to create an immersive gateway to connect the campus entrance with the community.

SOLUTION

Studiotech collaborated with Artin Light to bring their visionary concept of a digital light sculpture to life within the atrium. Studiotech took on complete ownership of project delivery, encompassing engineering design, fabrication, supply, installation, as well as control and programming.

PRODUCT

Studiotech was responsible for the engineering design, supply and installation of the 7 metre high frames. The frames house RGB pixel LED which is controllable every 50mm. The LED sits in both the inner and outer face of the frames, which creates a 3D effect when the LEDs are mapped to provide a stunning light sequence, giving off a futuristic digital vibe.

EXPERIENCE

The installation seamlessly aligns with the raw industrial ambiance of the building, while achieving optimal impact through a sci-fi inspired light art display. This captivating installation effectively communicates the building's ethos to anyone who passes by.
