**ANGEL CENTRAL
ISLINGTON**

CLIENT Red Construction

DESIGNER Ryder Architecture

CONCEPT Regeneration of an outdated mixed use commercial space, which centred around reimagining Angel Central's public realm and placemaking amenities.

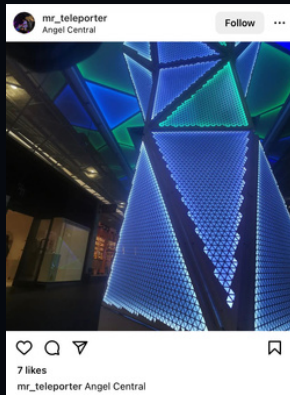

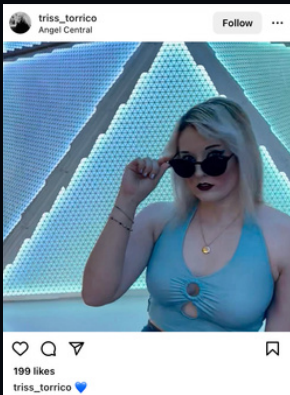

SOLUTION

Lighting played a pivotal role in rejuvenating the popular Angel Central Shopping Centre. Multiple areas were illuminated, including the exterior facade, the undercroft, and a captivating light art installation which made a feature of the elevator area.

PRODUCT

The centerpiece of the project is the mesmerising light art installation, seamlessly extending the exterior facade's shapes into the interior space. Studiotech not only provided and installed the diffused RGB LED panels to create a kaleidoscopic effect but also took charge of controlling and programming the dynamic lighting scenes.

EXPERIENCE

The lighting design significantly contributes to the overall customer experience during the redevelopment. By enhancing the environment for both daytime and nighttime activities, it creates a more inviting, vibrant, and visually appealing atmosphere for visitors.
