**DESIGNER**

The Harris Partnership

**CONCEPT**

The Springs, Leeds; an exciting new retail and leisure destination requiring an equally enticing lighting solution. Designed by The Harris Partnership to push the boundaries in public realm design.

## SOLUTION

The first of its kind in the UK, this linear style catenary solution designed by the Harris Partnership provides functional lighting yet transforms the public realm into a one-of-a-kind leisure setting.

## PRODUCT

Each stainless steel catenary cable was manufactured to an exact length and was fixed to the buildings at positions agreed with the structural engineer. Studiotech mounted over 170m of RGBW strip luminaires enclosed within a bespoke flexible PVC housing to the suspended catenary system..

## EXPERIENCE

Lighting now gracefully illuminates the public realm. Tying in with dynamic colour changing RGBW LED to the mirror cladding, wall wash to the cinema façade, linear under soffit ambient lighting and living wall inground uplighters. The lighting creates an engaging and flowing atmosphere for visitors as they journey through the centre.
