CYCLE STUDIO

CLIENT Hale Country Club & Spa

DESIGNER Zynk Design

CONCEPT The vision was to create an immersive spin studio where dynamic lighting could enhance the energy and atmosphere of each session, while integrating seamlessly with the interior and wider technology.

SOLUTION

Studiotech developed the layout for the illuminated ceiling, we designed and fabricated a bespoke frame to house the lighting, creating a discreet and coordinated finish.

The complete system was supplied, installed and programmed by Studiotech, with a control solution capable of synchronising the lighting with the studio's AV system

PRODUCT

Traxon Media Dot Go RGBW was selected to create the illuminated ceiling feature. Each dot can be individually controlled, allowing colour, patterns and movement to travel across the studio.

- Traxon Media Dot Go RGBW
- Madrix control system using Art-Net
- Bespoke fabricated frame

EXPERIENCE

Dynamic scenes allow the colour, movement and intensity of the lighting to evolve throughout each class, supporting everything from high-energy sprints to recovery periods.

The result is a high-impact environment where lighting becomes part of the rider experience.
